BOARD OF TRUSTEES.

JNO. S. MOORE, A.M., M.D., PRESIDENT.

MORTIMER KENNETT, Esq., SECRETARY.

HON. TRUSTEN POLK.

EDWARD BREDELL, Esq.

CHAS. GIBSON, Esq.

FACULTY.

WM. M. MCPHEETERS, M.D.,
Emeritus Professor of Materia Medica and Therapeutics.

Paid JOHN S. MOORE, M.D., 605 Walnut street,
Prof. Principles and Practice of Medicine, and Dean of Faculty.

Paid CHAS. O. CURTMAN, M.D., 3718 North Ninth street,
Prof. Chemistry, Pharmacy, and Toxicology.

✓ G. M. B. MAUGHIS, M.D., 2801 Olive street,
Prof. of Obstetrics and Diseases of Women.

Paid P. GERVAIS ROBINSON, M.D., 101 North Tenth street,
Prof. Clinical Medicine and Principles of Diagnosis.

GEORGE W. HALL, M.D.,
Prof. of Physiology and Clinical Diseases of Children.

A. P. LANKFORD, M.D., 523 Walnut street,
Prof. Surgery and Clinical Surgery.

J. K. BAUDUY, M.D., 2106 Clark avenue,
Prof. of Psychological Medicine, Diseases of Nervous System, and Medical Jurisprudence.

Paid CHARLES E. MICHEL, M.D., 101 North Tenth street,
Prof of Histology and of Diseases of the Eye and Ear.

T. L. PAPIN, M.D., 1601 Washington avenue,
Clinical Professor of Gynecology.

✓ EDWARD MONTGOMERY, M.D., — Olive street,
Prof. of Materia Medica and Therapeutics.

Paid H. TUHOLSKE, M.D.,
Prof. of Anatomy and Demonstrator. *Paid*

ADJUNCTS.

A. B. SHAW, M.D.,
Adjunct to Professor of Clinical Medicine.

J. P. KINGSLEY, M.D.,
Adjunct to Professor of Physiology.

M. YARNALL, M.D.,
Adjunct to Clinical Professor of Gynecology.

C. A. TODD, M.D.,
Adjunct to the Chair of Surgery and Lecturer on Otology.

ANNUAL ANNOUNCEMENT.

1873-4.

The Thirty-third regular Course of Lectures in the Missouri Medical College will begin on Monday, the 20th of October, 1873, and continue five months.

The preliminary Course will begin on the first day of October. This course will be free to all.

There will be regular Clinics at the Hospitals from the first of September, to which students are invited.

The Commencement for conferring degrees will be held early in March, 1874.

NEW COLLEGE BUILDING WITH HOSPITAL ATTACHED.

This announcement records an era in the history of the Missouri Medical College. Her faculty having been amongst the first upon this continent to appreciate the necessity for extensive clinical facilities in immediate connection with the College, determined to make this great change as soon as they could command the means and opportunity. This has now been accomplished, and she thus leads in the inauguration of a scheme which the ablest schools in the East are appealing to the Legislature of their State for means to enable them to carry out.

The faculty have been so fortunate as to connect themselves with St. John's Hospital, already established and in charge of the order of the Sisters of Mercy. This hospital has capacity to accommodate three hundred patients, and is watched over by the Sisters with characteristic devotion and painstaking.

The College building, which will be an imposing and elegant structure, adjoins the hospital, so that patients can be carried from the wards into the College amphitheatre, for examination or operation, without the slightest exposure or inconvenience.

The lecture rooms will seat four hundred students, and are so planned as to give all the advantages of modern improvements in ventilation, lighting, heating, seating, etc. Special pains have

been taken to make the large and well-arranged dissecting room as pleasant as such a room can be made. It is in the third story of the building, and the arrangements for lighting it day and night, thorough ventilation and heating, are unsurpassed.

Besides these there are apartments for a museum, a library room, Professor's reception room, and other appointments necessary to such a building. (See cut on outside page.)

The next Course of Lectures (1873-4) will be given in the new edifice.

The location is central, removed from the most noisy portions of the city, and is easily reached from almost any point of the metropolis by the various lines of street cars.

The City Hospital is conveniently situated and readily accessible, offering the opportunity of a healthful walk of one-half or three-fourths of a mile from the College buildings, or, if the student prefers, by the street cars. It is supplied with a large number of beds, affording plentiful material and frequent examples of all the varied forms of disease and injury; is administered by an efficient and obliging staff, and contains a comfortable and capacious amphitheatre, where the lectures may be delivered and surgical operations performed. Here the Professor of Clinical Medicine holds two clinics each week, the Professor of Surgery two, and the Professor of Diseases of Women two.

The Marine Hospital, a Government institution, is also readily accessible, and offers special advantages and attractions in some particular branches of Pathology connected with Surgery. So far as clinical teaching, both medical and surgical, is concerned, students of the Missouri Medical College will, through the courtesy and kindness of Dr. Allen, the physician in charge, enjoy special advantages and privileges.

The City Quarantine and Small-pox Hospitals offer peculiar advantages, and may be visited by students at their pleasure.

The St. Louis Insane Asylum, a very large institution, may be visited by advanced students in the company of a professor.

Through the kindness of the attending surgeons, the St. Louis Eye and Ear Infirmary, and Infirmary for Diseases of the Throat (Nos. 1407 and 1409 North Twelfth Street), is open to the students of the College. The attending surgeons hold daily clinics, and those who desire to do so may attend them regularly.

The St. Louis Western Dispensary is also open to the students of the College.

COURSE OF STUDY.

PRACTICAL ANATOMY.

The Faculty desire to impress upon the students, both Seniors and Juniors, that it is not optional with them what portion of their time they devote to this branch, but that it is expected that they will attend the dissections in this school as long as they may be students thereof. Anatomical material is both abundant and cheap.

PHYSIOLOGY.

The course on this branch is divided into two sections. First, Normal Histology or Microscopic Anatomy, which will be taught by Prof. Michel, and thoroughly demonstrated with the microscope, so as to render the student perfectly familiar with the structure of organs, and with the minute anatomy of their constituent tissues. This will occupy the first half of the course. The second section will be devoted to physiology proper, or the function of organs, which the student will the better appreciate with the preparation derived from the previous and distinct Histological course. This section of the course will be taught by Prof. Hall.

CHEMISTRY.

The course of Lectures on Chemistry proper will be preceded by a number of lectures on that part of Natural Philosophy generally designated as Chemical Physics, illustrated by copious experiments and select modern apparatus. This appears the more necessary as so many students come to the College without having previously studied experimental natural philosophy according to modern views, who are thus enabled to understand chemistry much better than would be possible without such preparation. At the close of the course, Pharmaceutical Manipulations and the art of writing prescriptions will receive

attention in several special lectures. Facilities for instruction and actual work in Analytical Chemistry will be given to those desiring it, on liberal terms.

PATHOLOGICAL ANATOMY.

Post mortem examinations will be frequent during the course, and students will be afforded the opportunity of making the same under the superintendence of Professors. Pathological Anatomy, in its special relations, will be taught by the respective Professors of the several practical branches.

PRACTICAL GYNÆCOLOGY AND OBSTETRICS.

The Professor of Obstetrics and Diseases of Women, and the Clinical Professor of Gynæcology, have well established Clinics at the City Hospital and at St. John's Hospital, the female wards of which literally furnish more cases than can be examined and treated before the class. Advanced students are formed into classes, which attend these Clinics in rotation, thus giving to each member the best opportunity to become familiar with every variety of this class of diseases.

CLINICAL MEDICINE.

The course on this branch is so conducted that the students are afforded abundant opportunities for the practice of auscultation, percussion, etc., at the bed-side; while the application of the microscope and chemical tests as aids in the diagnosis of disease is made in the lecture room in all cases demanding their use. The use of the thermometer, and of the various forms of electricity, both as therapeutic and diagnostic agents, will be demonstrated by the Professor of Clinical Medicine.

PRACTICAL SURGERY.

In addition to the regular lectures and clinics, the Professor of Surgery and his assistants will give special instructions in the application of bandages, surgical apparatus, etc., and in the performance of operations upon the cadaver in the operating room during hours not regularly taken up with other exercises in this department. Each student is thus practically trained in these manipulations.

INSANITY AND NERVOUS DISEASES.

Students desiring to devote special attention to this department will have the privilege of regularly visiting St. Vincent's Insane Asylum, with Professor Bauduy, who has charge of the institution. This is one of the largest and best managed Asylums in the country, and therefore affords peculiar facilities for the illustration of the course of lectures upon this branch.

SPECIALTIES.

Diseases of the Eye and Ear being branches of medicine requiring special attention, the Faculty have established a Professorship devoted to them; Dr. Chas. E. Michel, a gentleman of large experience, extensive Ophthalmological practice and marked ability to teach, as has been satisfactorily proved by four years' connection with the College as a Lecturer, has been appointed to the chair. This department is abundantly illustrated at the Eye and Ear Clinics of the City and St. John's Hospitals, under the charge of Prof. Michel, where each student has an opportunity of examining for himself, under direction of the teacher, the various forms of disease and injury to which these delicate organs are liable, and of witnessing a great variety of operations.

To the Clinics already mentioned will be added another, exclusively for the diseases of Children, under the charge of Prof. Hall and his assistants; the Faculty having secured the privileges of drawing material for these clinics from several institutions devoted to the care of the young, viz.: St. Bridget's Asylum, corner Twenty-sixth street and Christy avenue; St. Joseph's Asylum, corner Fifteenth street and Clark avenue; St. Mary's Asylum, corner Tenth and Biddle streets.

A practical knowledge of infantile diseases is a well known deficiency in the education of the recent graduates, and yet there is no department of medicine in which he is more likely to begin the test of professional qualifications. The value of this additional clinical advantage will be readily appreciated.

It is apparent then from the number of available clinics, the abundance of material, and the prominence given to clinical lessons, that, without neglecting the usual didactic lectures, the course will be eminently practical; the aim of the Faculty being to prepare the student, in as short a space of time as possible, for the realities of his professional life, that he may leave his "alma

mater," not only well grounded in the principles of Medicine and Surgery, but that he may already have seen something of their practical applications, may have witnessed the actual realities of the pictures so well portrayed by the abler writers, may have acquired a practical knowledge of the application of instruments and the therapeutic effect of remedies.

We do not hesitate to affirm that, with diligence, regularity in attendance, and industry, the student may, with the present advantages we offer, condense into the period of two or three years the ordinary experience acquired by a practice of twelve or fifteen, so that he shall be prepared, at the very threshold of his medical career, to combat the "ills that flesh is heir to," and the phases of disease he will meet will be to him as familiar as household words.

It is confidently asserted that no institution in this country offers greater advantages for a thorough and complete medical education, and it will be seen, by reference to the list of Professorships, that every branch which can bear upon a medical education, preparatory either to a general or special practice, is represented.

REQUIREMENTS FOR THE DEGREE OF DOCTOR OF MEDICINE.

1. The candidate must be twenty-one years of age, of good moral character, and must have been engaged in the study of medicine at least three years, including the courses of lectures.
 2. He must have attended two full courses of lectures, the *last* of which *must* have been in this institution; the *first* may have been in some other respectable school.
 3. He must have attended the dissections and hospital clinics in this school as long as he was a student thereof.
 4. He must write an acceptable Thesis on some subject connected with medicine.
 5. He must, by the first of February, notify the Dean, in writing, of his intention to become a candidate, and at the same time deliver to him his Thesis, together with the graduation fee, which in case of withdrawal or rejection shall be returned. He shall also furnish to the Dean, at the same time, satisfactory evidence of having complied with all the preliminary requisites.
- 40'chick

6. He must pass a satisfactory examination by the Faculty in all the branches taught in the College.

7. Practitioners of *long* standing will be admitted as candidates for graduation on attending one course of lectures in this institution.

F E E S .

For a full Course of Lectures,	-	-	-	\$105 00
Matriculation Fee (paid but once),	-	-	-	5 00
Demonstrator's Fee,	-	-	-	10 00
Graduation Fee,	-	-	-	20 00
Hospital Tickets	-	-	-	Free.

The fees must be paid promptly at the beginning of the term, as the tickets will be required to be exhibited to the Dean after the expiration of the second week of the session.

Physicians residing in or passing through the city are cordially invited to attend the lectures and clinics of the College.

Graduates of other regular schools are admitted to the course of lectures on paying the matriculation fee only.

Students may attend the lectures of one or more Professors, on paying the matriculation fee, and purchasing single tickets at \$15 each.

Those desiring practical instruction in Analytical Chemistry can obtain it at moderate expense.

Any further information will be cheerfully furnished by the Dean, to whom all business communications should be addressed, although letters directed to any member of the Faculty will receive prompt attention.

Students, on arriving in the city, should call on the Dean at his office, northeast corner of Sixth and Walnut streets.

JOHN S. MOORE, M.D.,

Dean of Faculty,

Northeast corner Sixth and Walnut streets.

TEXT BOOKS.

Students are advised to furnish themselves with at least one author in each of the following classes :

Surgery—ERICHSEN, ASHHURST, GROSS, DRUITT, HOLMES, BILLROTH.

Practice of Medicine—HARTSHORNE, NIEMEYER, AITKIN.

Materia Medica—WOOD, STILLE, PEREIRA, WARING, BIDDLE, U. S. Dispensatory.

Physiology—DALTON, MARSHALL, CARPENTER.

Chemistry—ROSCOE, FOWNES, MILLER.

For Laboratory Use—ATTFIELD, GALLOWAY ODLING.

Toxicology—TAYLOR, BECK.

Pharmacy—MOHR, REDWOOD & PROCTOR, PARRISH, U. S. Dispensatory.

Obstetrics—CAZEAUX, HODGE, BEDFORD.

Diseases of Women—THOMAS, HEWITT, SIMS.

Diseases of Children—SMITH, MEIGS & PEPPER, VOGEL.

Anatomy—GRAY, WILSON, LEIDY, HOLDEN (Dissector).

Clinical Medicine—BARCLAY'S MEDICAL DIAGNOSIS, DA COSTA'S MEDICAL DIAGNOSIS, TANNER'S CLINICAL MEDICINE.

Nervous Diseases—HAMMOND, TODD.

Insanity—MAUDSLEY, BUCKNILL, TUKE.

Histology—FREY'S MICROSCOPE.

DISTRIBUTION OF PRIZES.

At the beginning of the session, the Alumni Association of the College offered three prizes for general proficiency in all the branches taught. After a public competitive examination, the prizes were awarded as follows:

First Prize—A sixty-dollar microscope, to GEO. HOMAN, of Quincy, Ills.

Second Prize.—A case of surgical instruments, to G. WENDLANDT, of Carondelet.

Third Prize.—"Niemeyer's Practice," to JOHN R. HALL, of Saline county.

The Chemistry prizes offered by Dr. Curtman were awarded as follows:

First Prize.—Consisting of books, to T. E. HOLLAND, of Platte county.

Second Prize.—Consisting of books, was divided between G. WENDLANDT and Mr. LEWIS.

Dr. Lankford's prize for the best report of his Clinics, (consisting of a pocket-case of surgical instruments) was awarded to GEORGE F. BARR, of Quincy, Ills.
